

How To Use

Eclipse Q

Mount the Alpha® Eclipse Q blade onto the Alpha® BAH-5/8 or FAH-5/8 (20mm flange) adapters. Place the blade on the appropriate adapter making sure the counter sunk holes drilled into the blade are facing upward.

Align the hole pattern of blade together with the hole pattern of the adapter and insert the counter sunk screws.

Tighten the screws using a screwdriver making sure the head of the countersunk screws are equal or below the height of the blade core.

The Alpha® Eclipse Q blade is now ready to be placed on an angle grinder rated for the diameter blade being used.

Always refer to the power tool's operation manual for correct mounting procedures.
