

Tools for SINTERED SLABS & PANELS

Alpha® now offers a series of tools for the new “Sintered Slab & Panel” such as Dekton®, Lapitec and Neolith, just to name a few. Since these materials are in a whole new product category, Alpha® has studied all phases of their fabrication and came up with a specialized series of tooling. The tooling has been tested and proven, so there is no need to spend time and money testing at the fabrication shop. Save time and start making money with these proven Alpha® Diamond Tools recommended by many manufacturers!

Recommended for: Dekton®, Lapitec, Neolith, Laminam™, StonePeak, SlimLite™, Kerlite, Porcel-Thin, XLight, Thin Slab Porcelain, Techlam®, Slim Slab and many other sintered slabs and panels.

- **TWINCUR GEM-V** for straight and beveled edge polishing using multiple-head polishing machines
- **CNC COREBIT** for Dekton® for core drilling for corners of sink and faucet holes
- **SILENCER III** for Dekton® for bridge saws
- **CNC FINGER BIT** for Dekton® for sink hole cut-outs and any exterior cutting applications
- **ELECTROPLATED DRILL BIT** for drilling anchor holes
- **CERAMICA DRY/CERAMICA EX** are specifically formulated to provide the best possible finish
- **DIAMOND HAND PADS** used to perform convenient, on-site polishing
- **KATANA BLADE** for providing straight, precise cuts for all your needs at the jobsite
- **CERAMICA TF** to create a honed finish
